

AFRICAN VIOLET

A healthy African violet will bloom for nine months and then rest for three. Despite their delicate appearance, they are not difficult to care for. Keep their soil moist to dry and allow it to dry out between watering's to encourage blooming. Because water can damage their leaves, always water them from the bottom by placing the container in a tray of water. Allow the plant to absorb the water for about 30 minutes.

Place your African violet in moderate to bright, indirect light, and avoid exposing them to sudden temperature changes. Pinch off wilted blossoms and leaves to encourage blooming, and fertilize monthly or when the plant is actively growing new leaves and buds.
